Contents

TODO #C Setup Microsoft Teams

TODO #C UPS automatic graceful shut down

Waiting for the new server to get in to do this. For now, the UPS client is running on the Filemaker machine and is sending status notifications to my email.

- Periodic extra drive backup.

- iDRAC?\

- Windows Admin Center?

TODO #C Migrate FileMaker Server

TODO #C Migrate all vsphere-01 VMs

TODO #C Configure phone(s)

Tried to configure some old Grandstream phones but I couldn't get them to work. Looked on 3CX and the provisioning seemed to be the same as the other phones. On the phone's display it kept saying that it wasn't configured. Seems like we need to just order some new phones that are the same kind as the others.

Erik's phone is the model GXP2170
amazon link* List for Sigma IT contractor

TODO #B Configure NUMA

- AMD EPYC 7302

- 2 sockets

- 64 Logical processors

- 16 cores per socket

- Hyperthreading enabled

TODO #E iDRAC

TODO #F NIST Compliance

TODO #F Domain Controller setup/migration

Learn how to configure Certificate Authorities

TODO #F Figure out AD certificates issue

- **AIA**: Authority Information Access

- **CDP**: Certificate Distribution Point

- **CRL**: Certificate Revocation List

[2019-12-31 Tue]
Service specific error: 2148081683

Tried to add the revocation checking back into the certificate services
with the following:

certutil –setreg ca-CRLF_REVCHECK_IGNORE_OFFLINE

net stop certsvc
net start certsvc

But I had to add it back because doing this gave me that error. Changed
the minus to a plus before CRLF_REVCHECK_IGNORE_OFFLINE.
